

Battery power supply does not turn on

Why is my battery not working?

It could be that the power up sequence requires a larger draw on the battery (like a car, for instance) and that either the pins are not making contact to start the machine or an issue like that is preventing the battery from sending enough power to start the device.

What if my Dell laptop turns on without a battery?

Refer to the laptop's user guide or service manual. If the laptop turns on without the battery, contact Dell Technical Support to explore repair options available in your location based on your device's warranty status. Real-time clock (RTC) reset restores the BIOS to factory default settings and resets the date and time.

Why is my laptop battery not charging?

If your battery isn't fully charging, the first thing you can try is the Battery troubleshooter in Windows 10. Complete the wizard then restart your device to see if the problem is resolved. Most laptop computers include their own factory diagnostics utilities, too. It is recommended you also use those to test your battery.

Why is my battery not charging with the AC adapter connected?

When the battery capacity remains around 94% to 97%, the battery will not charge with the AC adapter connected. You can unplug and re-connect the AC adapter several times to resume charging to 100%. If you experience the problem which is The battery stop being charged after the battery level is charged to 60% or 80%.

Why is my laptop not turning on?

1. Check the power supply and battery The most common reason for a laptop not turning on is a problem with its power supply. Start by checking these points: Ensure the power cord is securely connected to both the laptop and the wall outlet. Try a different wall outlet to rule out issues with the power source.

Why is my battery not charging to full?

Battery not charging to full If you experience the problem which is The battery doesn't be charged when power level is above 95% with AC adapter connected. This is a normal condition for battery protection, not a problem for either the battery itself or the charging function. When the battery is charged to 100%, it will stop being charged.

Try performing an EC (Embedded Controller) reset, RTC (Real-Time Clock) reset, or a hard reset to restore hardware to default settings and resolve battery charging issues. If the issue persists after performing the CMOS clear (EC reset), proceed to the next troubleshooting step.
