

# Is the San Diego battery pack safe

Will San Diego County bolster safety regulations for battery energy storage facilities?

Though details still need to be hammered out, the San Diego County Board of Supervisors passed a measure Wednesday aimed at bolstering safety regulations for future battery energy storage facilities in the county.

What happened at SDG&E battery storage facilities in San Diego?

Three fires at battery storage facilities in the San Diego area have broken out in the past year. Last week, a fire at SDG&E's 30-megawatt, 120-megawatt-hours facility in Escondido led to the evacuation of about 500 businesses.

How much battery storage does California have?

Five years ago, the state counted a mere 770 megawatts of battery storage available to the California Independent System Operator, which manages the grid for 80 percent of the state and a small part of Nevada. By the end of this year, 10,379 megawatts are expected to be online and the state aims to grow that number to 52,000 megawatts by 2045.

What happened to the batteries that ignited at Gateway?

The batteries that ignited at Gateway were stored in a warehouse. "The warehouse burned for 17 days and I can't believe that didn't put a lot of toxic smoke" into the air, Desmond said. Going into Wednesday's meeting, a spate of fires has turned up the volume in the debate about battery facilities.

Why did District 5 approve a battery storage moratorium?

The measure passed 4-1, with District 5 Supervisor Jim Desmond casting the dissenting vote. Desmond approved the stipulations in the measure but wanted to add an additional safety precaution-- a moratorium to prohibit the battery storage operations in facilities that don't have isolated containers.

What is battery storage & why is it important?

Battery storage is considered a crucial piece in California's policy goal of deriving 100 percent of its electricity from carbon-free sources by 2045, if not sooner. Storage systems take solar power generated during the day and discharge the electricity later, especially from 4 to 9 p.m. when California's grid is under the most stress.
